News

The major stimulus package aimed at upgrading U.S. infrastructure should trigger a host of new sales opportunities for portable air-blast equipment.

Staying ahead of the competition, Empire SuperBlast® portables have become even more portable with the addition of two wheels as an **option**. Available on 1050 and 650 SuperBlast models, as well as the 350 model shown, our four-wheel platform enhances user friendliness by improving maneuverability. The extra wheels are offered as an option only, not as standard equipment.

But let's not forget the many field-proven features and innovations that have established SuperBlast as the industry's premier portable — and as the leading candidate for infrastructure blasting projects.

- **Low profile** reduces the strain of loading grit.
- **E-Z Fill™** breaks bags on contact, eliminating the stress of cutting and suspending heavy bags.
- **Built-in screen** filters out clumps and debris that cause clogging in competitor's pots.
- **Sound attenuator** reduces noise.
- **Dry-Flo™ moisture and oil separator** assures reliable performance under adverse conditions such as freezing temperatures.
- **Compact, front-mounted controls** reduce the chance of damage during moves between job sites.
- **Slim design** slips through narrow doorways.
- **Petcock**, a safety feature, allows supervisors to signal operators and shut off blasting at the pressure vessel.
- **Large piping** supplies plenty of air for fast work.
- **Flexible air line** is easy to maintain and eliminates the pressure drops associated with multiple fittings.
- **Empire's patented Sure-Flo® grit valve** combines unmatched precision and reliability with easy maintenance.
- **Lifting eyes and wide handle** simplify transport.
- **Pressure vessels**, rated to a working pressure of 125 psi, meet ASME and National Board standards.
- **Large inspection port** provides quick access to the pressure vessel's internals.

Because of its many strengths, SuperBlast technology plays a central role in three other Empire product lines: Blast Rooms, Pneumatic Blast & Recovery systems and Blast/Vacuum equipment. All three product groups are friends to the environment and attractive candidates for infrastructure work.

For more information about SuperBlast portables or any of Empire's air-blast products, please contact your local Empire distributor or Empire directly. Our communication links are shown below.
