# State-Side Success Opens Doors for Empire Rooms Worldwide

The adage, "**Success breeds success**," rings true for Empire's blast-room business. Superior product quality and effective selling continue to fuel our growth in the room market, and improved logistics have added another catalyst. More specifically, our increasing abilities to source production and provide turnkey service from multiple locations within the United States have put Empire rooms at the forefront of the industry in this country. The rest of the world is taking notice.

Customers spanning the globe from China, Taiwan and Vietnam to Canada and Mexico, plus two near the Persian Gulf, have been sufficiently impressed by the Empire rooms they've seen in the USA to place orders.

On the home front, domestic markets may also fuel demand for rooms if proposals to revitalize U.S. infrastructure gain traction. Although blast rooms don't normally serve on the front lines in highway and utility projects, they do play important supporting roles in rebuilding electrical generators, rail cars and heavy-construction equipment, just to list a few examples.

Empire's rooms include field-erected and pre-assembled equipment as well as our economical Pneumatic Blast & Recovery System (PRS), which gives users a range of blast-containment options.

*Field-erected rooms satisfy almost any size and operating requirement. Empire supports these systems with optional turnkey service throughout the United States.*

In addition, we offer all the latest technology for media recycling, dust collection, part handling, operator safety and **blasting**. We have the parts and people to surround any job with the right room.

**For more information about Empire Blast Rooms or any of Empire's air-blast products, please contact your local Empire distributor or Empire directly. Our communication links are shown below.**

*Pre-assembled rooms, available in heights of up to 10 feet and lengths to 20 feet, arrive ready for work.*
